

# Being Awesome with HTML

*A tutorial by Zoe F*

# HTML: The quick facts

- **What:** The most popular markup language existing for webpages
- **Who:** Tim Berners-Lee
- **When:** In 1991, only 20 years ago
- **Where:** CERN Labs
- **How:** Browser-interpretation
- **Why:** He was a genius?

# So what makes HTML so awesome?

- It's interpreted!
- It's simple
- It looks impressive without a lot of work

# House cleaning.

## Possible Tools:

- Wordpad,
- Notepad++
- HTMLKit
- Netbeans

# Some nomenclature to impress your friends and enemies

- Plain old boring content.

*I am some plain old boring content*

- Tags: What does this content look like?

*<MyTag> Boring Content</MyTag>*

- Attributes: I mean, what does it reeeeeally look like?

*<MyTag size=big>Content</myTag>*

# Nesting!

- `<tag1 >Content</tag1>`
- `<tag1 attribute = stuff><tag2>Content</tag2></tag1>`
- `<tag1><tag2>Content</tag1></tag2>`

## Deprecated Tags

These are the basics: A lot of the tags we go over today can also be implemented with CSS!

# The standard tags you gotta have

```
<!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Transitional//EN"  
"http://www.w3.org/TR/xhtml1/DTD/xhtml1-transitional.dtd">
```

```
<html>
```

```
  <head> </head>
```

```
  <body> </body>
```

```
</html>
```

# Text formatting

Making your content look pretty.

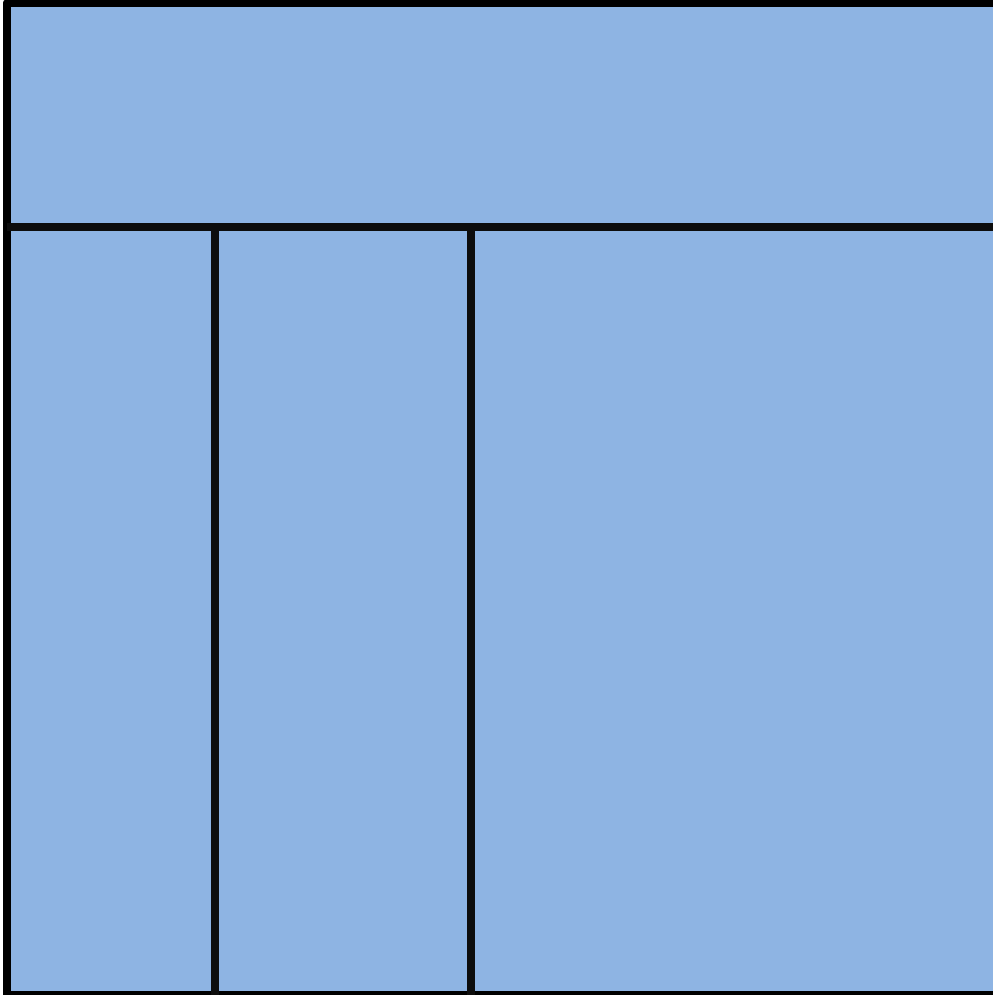

# Lists

- Numbered lists/Ordered Lists (OL)  
<ol>...</ol>
- Unordered Lists (UL)
- <ul>...</ul>
- List Items (li)  
<li>

# Doing stuff with images!

- `<img src = location of file>`

# Layout!

```
<table>  
  <tr colspan = 3>  
    <td></td>  
  </tr>  
  <tr>  
    <td></td>  
    <td></td>  
    <td></td>  
  </tr>  
</table>
```

Head and body tag info.  
Oooh the power.

# Commenting and beyond!

`<!-- Place the comment here! -->`

- Use them when the code gets complicated
- When you want others to be able to follow what you've done
- When you want to hide secret messages
- Whenever

# CSS: The final frontier

[http://www.w3schools.com/Css/css\\_reference\\_atoz.asp](http://www.w3schools.com/Css/css_reference_atoz.asp)

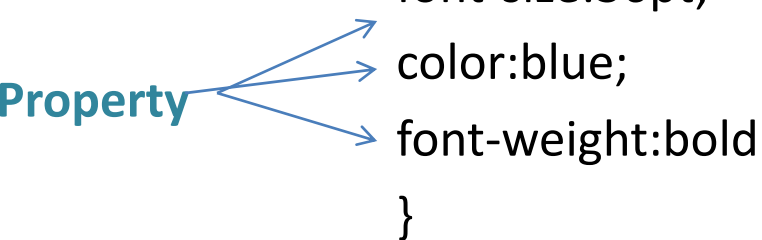

## The old way:

```
<font size = 36pt color = "blue">  
<B><h1>Hello</h1></b>  
</font>
```

## The new hotness:

```
H1 {  
    font-size:36pt;  
    color:blue;  
    font-weight:bold  
}
```

Property

---

```
<h1>Hello</hello>
```

# Internal Style Sheets!

- `<head>`

```
  <style type="text/css">
```

```
    body {background-color:yellow;  
          color:white; }
```

```
    p {color:blue}
```

```
  </style>
```

```
</head>
```

External stylesheets  
(dun dun duuuunnnn)
