

Flossing sucks

Problem spaces in getting kids to floss:

- Remembering to floss is difficult
- Flossing has to be done in a certain way to be effective
- Flossing is uncomfortable.
- Flossing takes a lot of time
- It's tough to convince kids that flossing is necessary
- Flossing is very uncool in general.

Cognating all over the place!

Experiential – The automatic, expertise stuff

Reflective – The tough, creative, problem-solving stuff

Cognitive processes. They look so....familiar!

- **Attention** (Making information present when you need it and easy to find, avoiding clutter)
- **Perception** (Making information and graphics legible, appropriate and easy to understand, grouping information properly)
- **Memory** (Not overloading users with complicated procedures, promoting recognition using images, icons, and consistency)
- **Learning** (Encouraging exploration, guiding the users to select appropriate actions)
- **Problem solving** (Supporting choosing different options, comparing trade-offs, and discovering other ideas.)
